Week 4 · Task 1

In Progress

Working with Modules and Packages

Intermediate

3 days

Python Development

ABOUT THIS TASK

This task focuses on using modules and packages to organize and reuse Python code. Interns will learn how to import modules, create their own modules, and understand the structure of Python packages. They will explore popular Python libraries and learn how to integrate them into their projects.

Task Requirements

What you need to complete and include in your submission

Requirements

- ☒ Basic understanding of Python functions
- ☒ Familiarity with file handling

Deliverables — add to your GitHub repo

- ☒ Creation of a custom Python module
- ☒ Example usage of a third-party Python package

Helpful Resources

[Python documentation on modules and packages](#)[Tutorials on using popular Python libraries \(e.g., NumPy, Pandas\)](#)
